

A PDF workbench

One Vue component. Explicit CSS. Browser-only runtime.

01 SSR SAFE

The viewer runtime is imported only after mount.

02 SUBPATH FIRST

Use `@polyloom/vue/embedpdf-vue` for focused installs.

03 LOCAL ASSETS

PDF and PDFium WASM stay under your deployment policy.

IMPORT

```
import { EmbedPdfVue } from '@polyloom/vue/embedpdf-vue';  
import '@polyloom/vue/embedpdf-vue/style.css';
```

PAGE 02 / INITIAL PAGE TARGET

The second page is ready.

If this page opens first, initialPage and layout timing are working.

- Document loaded from a local fixture
- PDFium WASM resolved by the application bundler
- Page index clamped after layout is available
- Keyboard focus remains visible

Fixture contract

This document contains exactly two A4 pages.

It uses built-in PDF fonts and no remote resources.

Its deterministic metadata keeps source control diffs stable.

It may be redistributed with the PolyLoom repository.
